

CrimpCenter 36 Fully Automatic Crimping Machine

New Schleuniger CrimpCenter 36

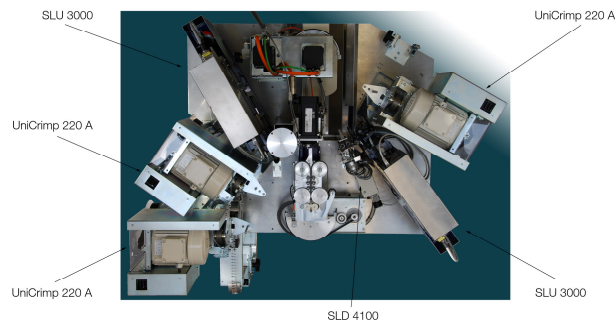

This fully automatic crimping machine combines high precision technology with a compact new design for maximum efficiency. The CrimpCenter 36 complements the field-proven high performance 6-Series with the new economical 3-Series.

The new CrimpCenter 36 can accommodate up to 6 processing stations and is suitable for a variety of applications for cross sections from 26 to 12 AWG (0.22 to 4 mm²). Modern manufacturing materials and patented technologies allow for a compact, economic design without compromising the high Schleuniger quality standards of the 6-Series. Proven state-of-the-art components provide outstanding output rates

and the synchronized Ethernet powerlink ensures fast and continuous communication between the software and the 5 servo drives. The 3-Series uses the “EASY” user interface software, which is also used in the 6-Series. It features a color touchscreen and icon-based menus, making the new CrimpCenter 36 equally flexible and user-friendly. Numerous options and quality devices can be integrated to accommodate rigid quality standards.

The new UniCrimp 220 A Crimping Machine includes crimp force monitoring (CFM 20), manual crimp height adjustment, jog mode and split cycle as standard features. The UniCrimp 220 A utilizes the innovative CFM 20 designed by Schleuniger. The CFM 20 includes a Dynamic Tolerance feature to improve accuracy in error detection even for the slightest of errors.

Like its predecessors, the CrimpCenter 36 is made more efficient when the optional ToolingShuttle 30 and EASY Production Server systems are utilized. Further investigation will show you just how versatile and efficient the CrimpCenter 36 could be for your operation.
